*Quick Action Point*

## Fly & Carp Hook Selection

[www.greenwavefishing.com](http://www.greenwavefishing.com)

## **PREMIUM RANGE**

With more than 80 years of skill and dedication in fishing hook making industry, GW has perfected the techniques of incorporating enhanced manufacturing processes with advanced and finest raw materials selected, for every aspect of our hook production to ensure they meet, satisfy and ecstatic experience to the most demanding fishermen. All our hooks are designed and optimized to be fished in the toughest angling situations anywhere in the world. Our products are among the highest performance in relation to price and quality consistency, offering anglers the greatest value and fishing experience in the market today.

The range will be expanded to include more models and patterns and will roll out in phases in the future to be more comprehensive!

### **LEGEND**

**RING**

**FORGED SHANK**

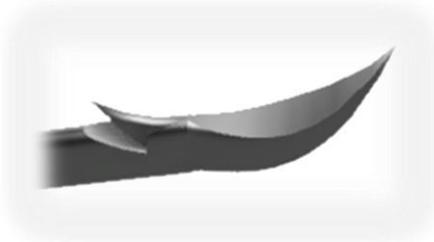

**FORGED POINT**

**BARBLESS**

**OFFSET POINT**

This special cold forged point is the showcase of achieving the optimum ratio for sharpness and strength. The streamlined and extended point length configuration give the extra push for speedier penetration yet preserving its holding strength – without the worry of point/tip being rolled-over.

### **NAKED-POINT PLATING**

This automobile-industry plating technology has enhanced the smoothness and shininess of the hook. The eye-catching exotic color pigments and coating chemicals are specifically formulated to achieve the exquisite and aesthetic appearance for the ever-demanding anglers. Its luster will stay longer, but most importantly its hook point remains “uncoated” – so no additional coating material thickness is added to the point thus preserving the sharpness. Most popular colors available are:

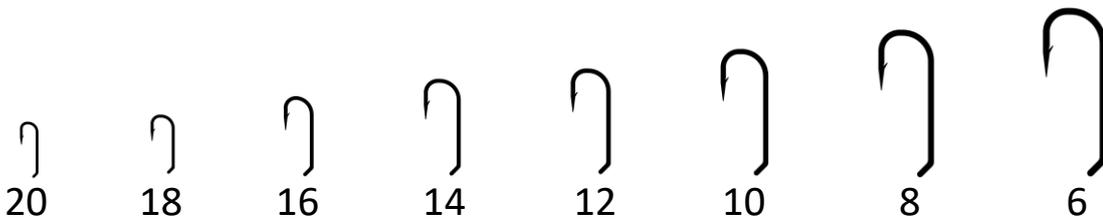

- **RED**
- **PINK**
- **BLUE**
- **BLACK**
- **GREEN**
- **PURPLE**
- **YELLOW**

## SLIK-SET COATING

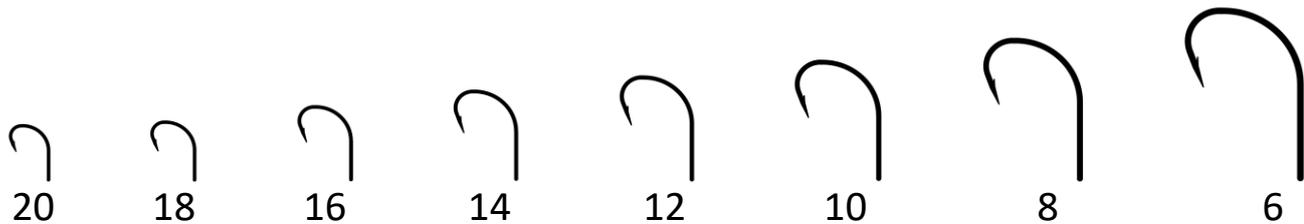

GW Slik-Set coating also known as PTFE coating in the industry, is a fluorocarbon solid used in a wide range of consumer and industrial products. It has a high molecular weight made up solely of carbon and fluorine where it has the unique properties such as highly resistant to corrosive chemicals, withstand extreme temperatures for both hot and cold, UV ray resistant, does not absorb water and very low in friction. Incorporating this premium-grade coating onto the hook has greatly enhance the aesthetic and smoothness of the hook, increases the speed of penetration and hook up rate exponentially.
